Ojaswee Upadhyay

Dehradun, India | +91 79855 48606 | ojaswee2095@gmail.com | LinkedIn | github.com/Ojas2095

Education

University of Petroleum and Energy Studies (UPES) — Dehradun, India
B.Tech in Computer Science | ***CGPA: 8.1/10.0*** — *Expected May 2028*

Technical Skills

Languages: TypeScript, JavaScript, Python, C++, Java, SQL
Frontend: React, Next.js, Tailwind CSS, Framer Motion, Three.js, React Native
Backend & Cloud: Node.js, Express, FastAPI, PostgreSQL, MongoDB, Docker, Git, Vercel, Supabase
AI & Systems: LLM Integrations (Gemini, OpenRouter), RAG Pipelines, WebSockets, REST APIs
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

Experience

Co-Founder & Chief Technology Officer (CTO) — Dec 2025 – Present
NaviiGo (naviigo.in) — *Dehradun, India*
- Architected and deployed **NaviiGo**, a connected travel companion platform engineered with Next.js 14, TypeScript, Tailwind CSS, and Leaflet.js.
- Engineered modular itinerary discovery and booking workflows with Google OAuth, responsive SSR pipelines, and interactive geospatial mapping.
- Directed full-stack product architecture, Vercel CI/CD pipelines, and performance optimizations achieving sub-second page loads.

React Developer Intern — Jun 2026 – Present
Sentienta QualityAI (Return Offer | Prev: Jun 2025 – Aug 2025) — *Remote*
- Received a return offer to engineer internal enterprise tools and high-throughput QA review dashboards using React and Tailwind CSS.
- Architected and delivered 8 data-intensive QA interfaces, modularizing shared state to streamline manual test review cycles.
- Refactored legacy UI components into reusable TypeScript design systems, improving page load responsiveness across core navigation.

Full Stack Developer Intern — Nov 2024 – Apr 2025
BuildXLayer — *Remote*
- Built RESTful backend microservices in Node.js and Express to handle user authentication, data caching, and asynchronous request queues.
- Optimized MongoDB database query latency by implementing strategic compound indexing and schema normalization across primary collections.

Open Source Contributions

Open Source Contributor — Feb 2026 – Present
tscircuit, OWASP Nest, ZIO Ecosystem — *GitHub*
- **tscircuit:** Triaged issues in open-source EDA tooling; contributed fixes to schematic layout generation and footprint component logic.
- **ZIO / ZIO-Blocks:** Resolved CI test regression pipelines and modernized legacy dependency bindings within the Scala ecosystem.
- **OWASP Nest:** Submitted and merged core bug fixes improving input sanitization and route handling reliability.

Projects

MorphOS | *Next.js, Three.js, Framer Motion, Gemini Vision, WebGL* | GitHub | Live Demo — 2026
- Engineered an interactive browser-based Generative OS featuring custom window management with Framer Motion spring physics.
- Integrated Gemini Vision API with a custom WebGL shader background to compile user-uploaded UI screenshots into interactive preview components.

VoiceShield | *Python, TensorFlow, FastAPI, WebSockets* | GitHub | Live Demo — 2026
- Architected real-time voice cloning attack detection system utilizing deep learning audio spectrogram classifiers and FastAPI.
- Implemented low-latency audio streaming via WebSockets with an interactive React dashboard for live authenticity scoring.

ColdEmailAI | *Next.js, Python, OpenRouter AI, Tailwind CSS* | GitHub | Live Demo — 2026
- Engineered an automated B2B outreach pipeline analyzing target company metadata to synthesize personalized email copy via LLMs.
- Built an end-to-end dashboard tracking email delivery status, bounce metrics, and prospect response logs.

Achievements

- **Smart India Hackathon (SIH) Finalist (2025):** Selected among top national teams in India's premier nationwide hackathon out of thousands of competing collegiate entries.
- **Competitive Programming & Problem Solving:** Active problem solver on LeetCode and Codeforces, focusing on Graph Algorithms, Dynamic Programming, and Tree Traversals.
